Each property will also get the monthly Irrigation Inspection for system breakages and recommendations. Nu-leaf will be putting a list of recommendations to modify existing system for coverage.

Raking and removal of leaves is still being done in order to make sure turf is ready for growing season.

Crape myrtle pruning is scheduled for and will be completed this month. Most of the myrtles have to be trimmed in order to control size of tree and clearances (building, walkways and canopy trees).

Dead and or failed plant material will be removed this month.

Chemical treatment of all turf is scheduled for the week of the 12th. The focus will be on initial control of turf weeds along with fertilization.

Schedules may change based on weather and other circumstances which may be outside our control.
