Design Guidelines

Approved by the CROA Board of Directors on 08/25/2009; effective for applications received on or after 10/01/2009.

LIGHTING – STRUCTURE-ATTACHED

All Design Guidelines, the ARC Meeting Schedule, lists of Product & Service providers and other ARC-related information is available on Celebration’s “My Front Porch” which may be access by owners/residents.

See also: Design Guidelines: Security Devices (Lights, Cameras, Alarms)

Exterior lights should be used to accent entrances and special features. Overall high levels of lights are not desired. No flood lighting of buildings shall be permitted.

Use of lighting should be integrally designed as part of the building environment and should reflect a balance for the light needs with the ambient light level and surrounding nighttime characteristics of the community. Lighting should be designed to minimize glare, light trespass, energy conservation and to maintain dark skies.

- Bulbs must be white or clear.
- Light emanating from an exterior light fixture shall not be directed into the street or adjacent properties.
- Exterior light fixtures shall have light sources diffused or shielded from view of the street or adjacent properties.

Additional light fixtures (not replacing an existing fixture) mounted on a siding surface must be mounted on a plinth. The size of the plinth must be larger than the mounting base of the fixture.

Exterior light fixtures which are visible from the street (or side street) should be appropriate for the architectural style of the home. Generally this will be a pendant carriage lamp mounted on the ceiling or a sconce mounted on the façade wall.

Exterior light fixtures facing the alley may be more utilitarian, although they should be appropriate for the time period and thus not contemporary in style.

Townhomes where all front entry doors are the same color must use the same light fixture as installed on the other units in the building. Townhomes where the front entry doors vary in color within a building may use differing light fixtures with prior approval. This condition applies to light fixtures on the front and back of the buildings.

Approval Process:

Applies to:	Method of Review	
All condominium properties	Review as determined by the condominium association	The condominium association’s Board of Directors (or architectural review panel, if designated) must approve the application before submitting it to CROA. Include documentation of the condominium association’s approval with the CROA application.
All residential	Streamline review	None

properties	by ARC Coordinator	
All residential properties	Formal review by ARC team at ARC meeting	All General applications

General Timelines:

Must begin project within	45 days of ARC approval letter
Must complete project within	15 days of starting the project
