SECURITY DEVICES (LIGHTS & CAMERAS)

Safety and security are important to every property owner and resident. Many of the most effective measures require little effort or expense – keep doors (including overhead garage doors) closed, don't allow mail or newspapers to accumulate, provide a "lived in" look by having lights on and/or opening/closing window coverings. Know your neighbors and watch out for each other.

If it is necessary to supplement with physical changes to the property, changes must be approved in the same manner as other exterior changes to a property by submitting an application to ARC.

Applications require a survey or plot plan of the property showing the proposed locations of the devices as well as pictures indicating how they will be concealed (i.e. photo of front porch showing which corner camera will go). Specifications for all proposed devices are also required, including size, color and image.

Any fixture that generates a verified complaint shall be redirected, relocated, removed or concealed upon demand.

Security Cameras

Location – Exterior security devices shall be hidden from public view to the greatest extent possible. The best location is often mounted under roof eaves; however, other locations may be reviewed. Creative alternatives are encouraged (i.e. back side of fences). At no time shall the security device be directed into neighboring properties.

Size – Cameras shall be appropriately sized to their proposed locations so that the size does not hinder its concealment. Conduits/wires must be concealed within the structure. Exposed wiring and conduits are not permitted.

Color – Camera housing and associated brackets shall be consistent to the location on which it is mounted. Housing and parts may need to be painted.

Flashing or strobing from cameras is not permitted if either warrants a complaint from neighbors.

Security Lights

Any exterior device and its accessories shall have its light source diffused or shielded from view of the street and adjacent properties. The best location is often mounted under roof eaves; however, other locations may be reviewed. Flood lights are not permitted.
